**1. The following reference is noted:**

A) Japanese Patent Document #2004289565 to Kushida:

Note English language abstract

**2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:**

**(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.**

**This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).**

Art Unit: 2621

**3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hatano (US 6,951,031 B2) in view of Mukai et al (US 2003/0152360 A1).**

A) The showing of Hatano:

As shown in Figure 4, Hatano discloses a program recording apparatus which obtains an electric program guide and receives and records a desired program by using the obtained electric program guide (see column 1, lines 29 - 32 and column 5, line 65 - column 6, line 16), comprising:

- 1) A recording device (@ 34);
- 2) A recording programming device for setting a recording of the desired program based on at least a broadcast time period and a broadcast channel [see 5, line 65 - column 6, line 47]; and
- 3) A Program information acquisition device (@ 2) [lines 1-32 of column 6]

B) Differences:

Claim 1 differs from Hatano in that Hatano does not disclose a searching means unit operable to search a character string in a predetermined region of the electric program guide including the set broadcast time period and broadcast channel; and

a controller operable to change said the set broadcast time period to a new time period when the predetermined word "extension" is detected in the character string.

C) Obviousness

Mukai discloses a searching means unit (14) operable to search a character string in a predetermined region of the electric program guide including the set broadcast time period and broadcast channel (see [026], [028] and [045]); and a controller (1) operable to change said the set broadcast time period to a new time period when a predetermined word is included in the character string (see [027] and [056]); i.e., wherein:

- 1) Mukai discloses that the predetermined word is "extension" (see [027] and [56]); and
- 2) Mukai discloses wherein the termination point of the broadcast time period is time-extended by a predetermined (see [075] and [076]).

Art Unit: 2621

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have added the searching unit and the controller of Mukai to the apparatus of Hatano to effectuate the entire recording of desired time series data (see [008]).

**4. Claims 2, 4, 8, 9, and 11, are rejected under 35 U.S.C. 103(a) as being unpatentable over Hatano (US 6,951,031 B2) in view of Mukai et al (US 2003/0152360 A1) for the same reasons that were set forth above with respect to claim 1.**

**5. Claims 3, 5-7, 10, and 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.**

Art Unit: 2621
